This query retrieves all rows in the EMPLOYEES table, even if there is no match in the DEPARTMENTS table. It alslso retrieves all rows in the DEPARTMENTS table, even if there is no match in the EMPLOYEES table.

Find the Solution for the following:

1. Write a query to display the last name, department number, and department name for all employees.

SELECT e.last-name, e.department_id, departement-name
FROM Employee e JOIN department .d ON e.department-id =
d.department-Id;

2. Create a unique listing of all jobs that are in department 80. Include the location of the department in the output.

SELECT DISTINCT e.job-id, l.location, l.city FROM Employee JOIN department
d ON e.department_id = d.departement_id. JOIN locations l ON
d.location_id = l.location-id WHERE e.commission-pct;

3. Write a query to display the employee last name, department name, location ID, and city of all employees who earn a commission

SELECT DISTINCT e.job_id, l.locating, l.city FROM employee e.JOIN
department .d ON e.depart_id = d.department-id .JOIN locations
l. ON WHERE department-id =80;

8. Display the employee last name and department name for all employees who have an a(lowercase) in their last names. P

SELECT e.last-name, d.department_name FROM
employee e.JOIN department d ON e.department WHERE e.last-name
LIKE '%a%';

5. Write a query to display the last name, job, department number, and department name for all employees who work in Toronto.

SELECT e.last-name, e.job id, e.department, d.department_name
FROM Employees e.JOIN departs d ON e.depart-id = d.depart
JOIN location ON;

6. Display the employee last name and employee number along with their manager's last name and manager number. Label the columns Employee, Emp#, Manager, and Mgr#, Respectively

SELECT e.last-name AS Employees, e.employees-id AS Emp#,
m.last-name AS 'Manager, M. employ-id AS' Mg # employees e
LEFT JOIN Employees M.ON;

7. Modify lab4_6.sql to display all employees including King, who has no manager. Order the results by the employee number.

SElEct e.last-name As employee, e.employee-id As Emp#, m.last-name As manager, m.employee-id As Mgr# FROM employees M ON e.manager-id;

8. Create a query that displays employee last names, department numbers, and all the employees who work in the same department as a given employee. Give each column an appropriate label

SELECT e.last_name As employee, e1.depart_id As DEPT-ID, e2 last-name As Collegue FROM employee e1 JOIN employee e2 ON e1 department-id, e2. department-id;

9. Show the structure of the JOB_GRADES table. Create a query that displays the name, job, department name, salary, and grade for all employees

DESCRIBE job-grades, SElECT e.last_name, e.job-id. d.depart-name, e.salary j.grade level FROM employees e JOIN departs d ON e.departs BETWEEN j1, lowest;

10. Create a query to display the name and hire date of any employee hired after employee Davies.

SELECT e.last-name, e.hire-data FROM employees e WHERE e.hire-data > (select hire-date FROM Employees WHERE last_name = 'Davies');

11. Display the names and hire dates for all employees who were hired before their managers, along with their manager's names and hire dates. Label the columns Employee, Emp Hired, Manager, and Mgr Hired, respectively.

SElECT e.last_name As employee, e.hire-date AS emp-hired m. last-name AS Manager, m. hire-date Mgr-hired FROM employees M ON e. manager-id = m. employee-id WHERE e.hire-date < m. hire-date;
